

DS-003/003S

Desktop Microphone Flange

Features

- DS-003 is a metal die-casting flange for desktop microphone. It features a heavy-duty, a low center of gravity, and an excellent stability.
- This flange can efficiently insulate the vibrations from the exterior noises and it has a good electromagnet shielding effect.
- Cushioned with rubber pads, this flange can greatly reduce the mechanical vibrations coming from the floor.
- As an ideal companion for condenser microphones, it may as well be used for dynamic microphones. In such case, the red LED does not flicker.
- **DS-003 has no switch while DS-003S features a switch.** When DS-003S is applied in a system powered with 48V phantom, the red LED will flicker ON or OFF to indicate its working state. Eject the switch to switch ON and press it to switch OFF.
- With the nice streamline shape, sturdy construction, appealing finish and excellent visual effect, DS-003 makes a primary companion for all kinds of gooseneck microphones.

Specifications

- Connector: XLR standard balanced socket
- Dimensions: 112x163x55mm (4.4x6.4x2.2")
- Weight: 1300g (45.86oz)

Packed in A3 Suitcase
